

Aberdeen Global - Select Emerging Markets Bond Fund

Class A (Base Currency Exposure EUR) - 2 Acc

Performance Data and Analytics to 30 April 2017

Summary investment objective

To achieve a combination of income and growth by investing mostly in bonds (which are like loans that pay a fixed or variable rate of interest) issued by companies, governments or other bodies in emerging markets countries. These are typically countries that are still developing their economies. The bonds may be of any credit quality and typically in the currencies of the countries where they are issued; the value of your investment will therefore be affected by the movements, up or down, of those currencies. The Fund is intended for investors who are willing to accept a high level of risk.

Cash includes cash at bank, outstanding settlements, call account cash, fixed deposits, cash used as margin and profit/losses on both derivative positions and forward currency contracts. Where bonds are split rated between two or more of S&P, Moody's and Fitch, the data shown takes a more conservative approach, splitting lower. This may not be consistent with the arrangement agreed in the prospectus, which may detail taking a higher rating where there is a split. In the absence of any agency ratings an internal Fund Manager rating may be applied. The benchmark shown reflects ratings from S&P, Moody's and Fitch only. This may differ from the ratings used by the benchmark provider.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- Emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk.
- This Fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- Investors are reminded that there is no segregation of liability between Share Classes in the same Fund, so there is a remote risk that under certain circumstances, other Share Class holders of the same Fund will be exposed to liabilities arising from currency exposure transactions undertaken for a Base Currency Exposure Share Class which negatively impacts the Net Asset Value of these other Share Classes. Base Currency Exposure Share Classes contain additional risks which are set out in this Prospectus under the "General Risk Factors" heading.

Fund Statistics

Weighted average life vs benchmark	10.1 vs 10.2
Modified duration vs benchmark	6.3 vs 6.6
Yield to maturity	6.2 vs 5.0
Yields ^A	4.63% underlying 4.63% distribution

Yield to Maturity is the yield that would be realized on a bond or other debt instrument if the security was held until the maturity date.

Modified duration measures the change in the value of a security in response to a change in interest rates. The higher the duration, the greater the change (i.e., higher risk) in relation to interest-rate movements.
